

## National accounts and balance of payments

1

### Danish economy 1999 to 2009

#### Economic downturn continues in 2009

The economic growth was significantly negative in 2009, which was the second year in a row with negative growth. After three years with high growth rates in 2004-2006 a more subdued growth rate in 2007 and negative growth in 2008 the Danish Economy experienced a historic negative growth of -4,9 per cent in 2009.

**Figure 1**  
Real growth in GDP

In comparison the real growth in GDP averaged 2.4 per cent from 2003 to 2007 which is the latest period with an economic upturn, while the growth rate from 2007 to 2009 was -2.9 per cent annually on average.

#### Decrease in employment

Four years of increasing employment was followed in 2009 by a drop in employment of 107.000 persons (3.6 per cent) so that the average number of persons employed was approximately 2,842,000. Of these, 41,000 persons were on leave in 2008.

Changes in employment are often seen with some delay in relation to the economic growth. This was seen clearly with the slowdown of economic growth in 2001 and again in 2004, when the economic conditions changed. In the period 1997-2002, employment rose by 102,000 persons.

During 2003 and 2004, the total fall in employment was 47,700 persons. From 2004 to 2008 the employment increased by 210,700 persons.

**Figure 2** Annual growth in employment

Note: Including leave.

www.statbank.dk/nat18

The share of the workforce employed in goods-producing industries (agriculture, etc., manufacturing, energy, and construction) has been continuously declining for several years. In 1999, 26.8 per cent were employed in the goods-producing industries, while in 2009 the proportion was 22.1 per cent. During the same period, employment increased, in particular in the private service industries (from 37.9

per cent in 1998 to 42.0 per cent in 2009). The percentage of persons employed in public and personal services was 35.3 per cent in 1999 and 35.9 per cent in 2009.

## 2

## Domestic demand and foreign trade

**Domestic demand has been the driving force in the economic development**  
In 2009, the domestic demand contributed negatively to the significantly negative growth in GDP. In the previous 10 years, the domestic demand was an important driving force behind the economic growth.

In this period, except for 1999, the domestic demand has contributed positively to the growth in GDP, while the net exports on several occasions have contributed negatively to the growth in GDP.

Among other things, this is due to changes in the economic growth abroad that affects the Danish exports. At the same time, increasing domestic demand is known to give rise to increased import of, e.g. consumer goods.

**Figure 3 Contribution to real annual growth in GDP**

### Decreasing foreign trade in 2009

From 1998 to 2008, Denmark's foreign trade has seen a relatively large increase, both when measured as a percentage of GDP and in current prices. In 2009 however the foreign trade declined considerably.

Particularly, trade in services has increased steeply when calculated in current prices. The import of services almost tripled from 1998 to 2008, and the export of services increased almost at the same rate.

In the same period, the import of goods was doubled, and the export of goods increased approximately 80 per cent.

**Figure 4 Imports and exports as percentage of GDP, current prices**

Among other things, the increase in trade in services is due to a higher growth of prices, compared to trade in goods. Mergers and acquisitions in the sea transport industries are other factors that have had an impact on trade in services.

**Figure 5 Final uses as a percentage of GDP, current prices**

### Increase in capital stocks

The share of the national wealth that is held in the form of fixed assets (net capital stock) grew in 2009 by 1.2 per cent and increased by 14.0 per cent from 1999 to 2009. The net capital stock has been continuously increasing over the period 1999-2009. The change in the capital stock (net capital stock) at current prices between two dates of compilation reflects net investment (the gross fixed capital formation less consumption of fixed capital), and the nominal valuations during the period.

**Figure 6****Net capital stock**

■ [www.statbank.dk/nat08](http://www.statbank.dk/nat08)

### Decreasing productivity

Based on the figures from the Danish working time account, it is possible to calculate the productivity per hour as the market gross value added per working hour.

The productivity dropped 0.2 per cent in 2009. in 2007 and 2008 it dropped 0.8 per cent and 3.0 per cent respectively. The productivity increased by an annual average of 1.4 per cent from 1998 to 2006. This results in an average annual growth rate of 0.6 per cent from 1999 to 2009, compared to an average growth of 0.4 per cent if the estimate is based on employed persons.

**Figure 7** Gross value added at 2000 prices (chained) per hour. Annual growth rate

■ [www.statbank.dk/nat02 and nat18](http://www.statbank.dk/nat02 and nat18)

### Increasing wage share in 2009

Total income from production comprises compensation of employees and enterprises' profits (gross operating surplus and mixed income). There was a general

increase in the share of wages and salaries of total incomes during the period up to 2000, but in 2000, there was a strong decline.

From 2001 to 2003, the wage share rose again followed by a moderate decline in the period from 2004-2006. The last three years the wage share has increased and reached a peak level of 68.6 per cent in 2009.

The figure below shows changes in compensation of employees as a proportion of GDP at factor prices.

**Figure 8 The wage share**

### 3 Balance of payments

**Figure 9  
Balance of current accounts**

#### Savings, the balance of payments and debt

The share of savings of the whole economy (i.e. savings as a percentage of gross national disposable income) increased from 21.3 per cent in 1998 to 24.3 per cent in 2001.

After 2001 the share of savings has been stable reaching its highest level in 2005 and 2006 where it was more than 25 per cent. In 2009 the share of savings went down to the level from 1998 at 21.5 per cent.

Since 1999, net lending has been positive. Net lending decreased in 2006 and 2007 but has been growing since. In 2009 the net lending was DKK 66.7 billion.

#### Denmark has positive net assets again

Danish net lending is contributing to a reduction of Denmark's foreign debt. In 2005, Denmark had positive net assets for the first time since the 1950s.

Net assets decreased between 2005 and 2008, despite a large surplus on the balance of payments. This is because the debt balance is also influenced by exchange rate fluctuations. In 2009, the net assets again were positive at 100 billion.

## 4

## Financial claims

### Fall in financial net equity of households

After a period from 1998 to 2006 where the financial net equity of households almost doubled, the financial net equity of financial households fell in 2007 and especially in 2008. In all years during this period households had a negative net lending.

Consequently, the explanation must be found in the development of *other changes in status, net*, where developments in the financial markets in 2007 and 2008 lead to large negative revaluations. Especially adjustments of share prices have affected the households' net equity both directly and indirectly through their pension scheme savings in life insurance companies and pensions funds.

In addition to the household sector, the national accounts include financial accounts for another three main sectors: corporate sector (non-financial and financial corporations), general government sector and the rest of the world. The financial claims consist of a number of financial assets and liabilities comprising, e.g., shares, bonds and loans. The difference between the total financial assets and the total financial liabilities constitute the financial net worth.

**Figure 10 Development in the net equity of households**

## 5

## Inflation

### Low inflation in 2009

After the inflation (measured as the annual increase in the GDP deflator) in Denmark reached 3.6 per cent in 2008 which was the highest level since 1989 the inflation in 2009 was just 0.4 per cent. The average increase in annual prices in the period from 1989 to 2007 was 2.0 per cent.

Between 1989 and 2007 the inflation has been both low and stable compared to the past, only in 2000 and 2005 did the inflation reach 3 per cent.

**Figure 11 Inflation measured as the annual increase in the GDP deflator****6****International comparisons****Declining international economy in 2009**

Among the countries with the greatest significance for Danish economic development, the United States and the United Kingdom in particular have had an economic downturn in 2008. Growth in Germany has been robust in 2008 compared to the rest of the EU while in Japan and Sweden there has been an actual reduction in economic activity in 2008 like Denmark. Since 1995, Denmark has experienced economic growth slightly below the EU average.

**Figure 12****GDP in selected countries, constant prices**

Source: Eurostat, New Cronos.

In 2009 the economic decline became global with a massive economic decline in every country that has significant importance for the economic development in Denmark.
