Population and population forecasts

Population size

Since the early 1970s, Denmark has had a population of more than 5 million inhabitants. The size of the population has seen a slow, but steady increase since 1970, and on 1 January 2013 it was 5.6 million people. However, during the early 1980s, the population fell due to reductions in the number of births.

Women are in the majority

Though more boys than girls are born every year, women comprise slightly more than half of the Danish population (50.4 per cent). This is because of higher mortality rates among men. There are more men than women in all age groups up to 55 years, except for the 37-year-olds, but women take over in all subsequent age groups. The age group 95-97 comprises more than four times as many women as men.

More births than deaths

Population developments depend on four components: live births, deaths, immigration, and emigration. The population increase during recent years is the result of two things: positive natural increase (births ÷ deaths) and positive net migration (immigration ÷ emigration). Positive net migration means that more people enter Denmark than leave it.

**Figure 1
Population**

Figure 2   **Population trends**
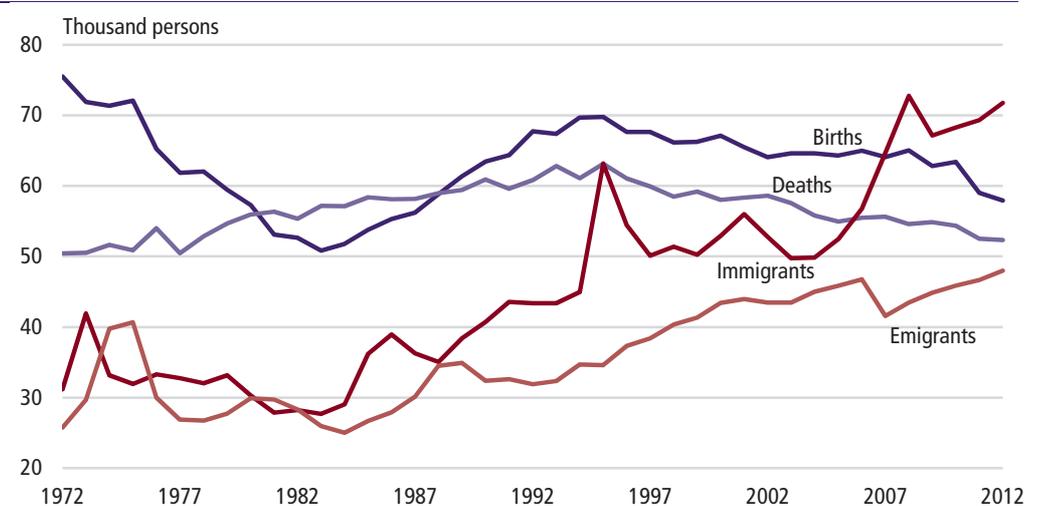

www.statbank.dk/hisb3

We are growing older

The Danish population is getting older. The average age in Denmark was 40.7 years as of 1 January 2013. For men, this figure was 39.7 years, and for women, it was 41.6 years. When examining 1980 figures, the average age was 3.4 years lower (an overall average age of 36.7 years; 35.5 years for men, 38.0 years for women).

This increase in the average age is caused by an increase of 63 per cent in the number of people over the age of 80. The increase is also occasioned by the fact that the large generations from the mid-1940s have now reached their sixties, as well as the fact that the large generations from the mid-1960s are now being classified to an older age group and are replaced by smaller generations.

**Figure 3   The Danish population by age. 1 January 2013**

www.statbank.dk/folk1

**Figure 4
Persons 100 years +**

www.statbank.dk/bef5 and frdk111

More Danes are older than 100 years
The number of people who are 100 years of age or more is rising. On 1 January 2013 a total of 1,009 people (843 women and 166 men) were 100 years or more. In 1980, only 158 people (40 men and 118 women) were 100 years of age or older. That is six times as much in a period of 30 years.

The demographic dependency ratio
The demographic dependency ratio is calculated on the basis of the population distribution by age. Dependency ratio shows the relationship between the number of persons outside the economically active population and the number of persons available to support them – i.e. the population of working age.

The demographic dependency ratio will increase in the years to come
If the economically active (working) population is calculated as those within the 20-59 age group, the dependency ratio in 2012 is 0.91. This implies that for every 100 economically active individuals, 91 persons need support.

On the basis of the projections on population development in 2011, the demographic dependency ratio will increase to 0.95 in 2020 and reach 1.07 in 2030. In the 1970s, the dependency ratio was higher, 0.94 on average. In the late 1990s, it was as low as 0.76. This implies that more and more people will need support in

the years to come, a development which is linked to the fact that the number of elderly people will continue to increase in future.

Major difference in the population growth among municipalities

In the coming years, the Danish municipalities will experience different trends in population growth. The municipalities of Eastern Jutland, Eastern Zealand and Aalborg Municipality will experience the largest increase in the number of inhabitants, while the municipalities of Northern Zealand and the rest of Jutland will see a partial decrease in the number of inhabitants.

The population projections are based on a calculation of births, deaths, migrations among the municipalities and a number of assumptions for trends in the future. Consequently, the population projections should be interpreted with caution.

Immigrants and their descendants

Immigrants and their descendants

In January 2013, immigrants and descendants comprised 10.7 per cent of the total Danish population (600,674 persons) – about 8.1 per cent are immigrants and 2.6 per cent are descendants. 54 per cent of all immigrants and descendants originate from a European country.

The largest group originates from Turkey, namely 60,672 persons or 10.1 pct. of all immigrants and their descendants. Poland and Germany are number two and three on the list, with respectively 34,000 and 32,000 immigrants and descendants in Denmark.

Figure 6   **Immigrants and descendants after country of origin. 1 January 2013**

Thousand persons
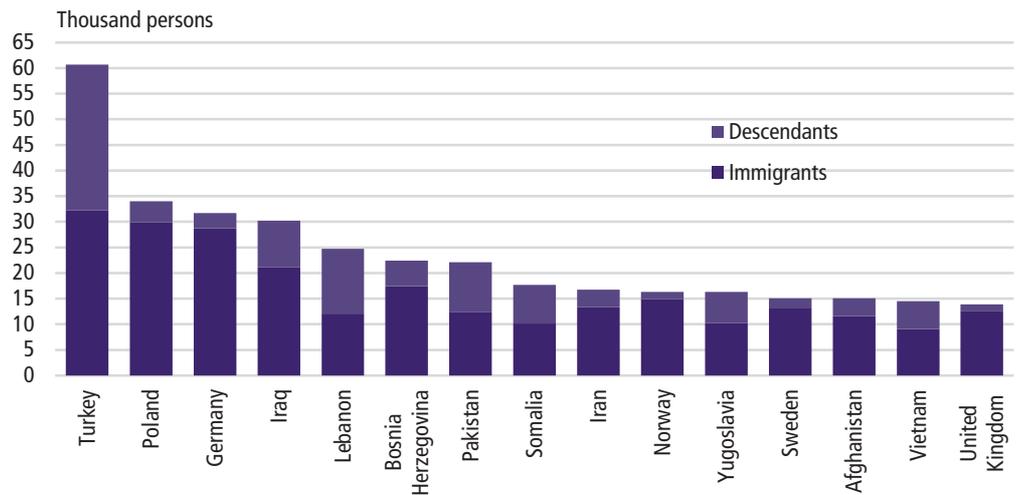

www.statbank.dk/folk1

Births and adoptions

How many children are born each year?

During recent years, the number of live births has been about 63,100, a year, corresponding to an average of almost 173 a day. In 2012 the numer decreased to 58,000. The number of births during a given period depends on the number of women of childbearing age and on the number of children born to each woman. In 2012, the *total fertility rate,* i.e. the average number of live births per woman, was 1.73 in Denmark.

A fertility rate at 2.26 is needed for the population to reproduce itself given the actual level of mortality. Through the 1950s and most of the 1960s, the fertility rate was above this level. From the late 1960s, the fertility rate fell until it reached bottom in 1983 at 1.38. Since then the fertility rate has risen.

Figure 7   **Fertility rates in European countries. 2011**
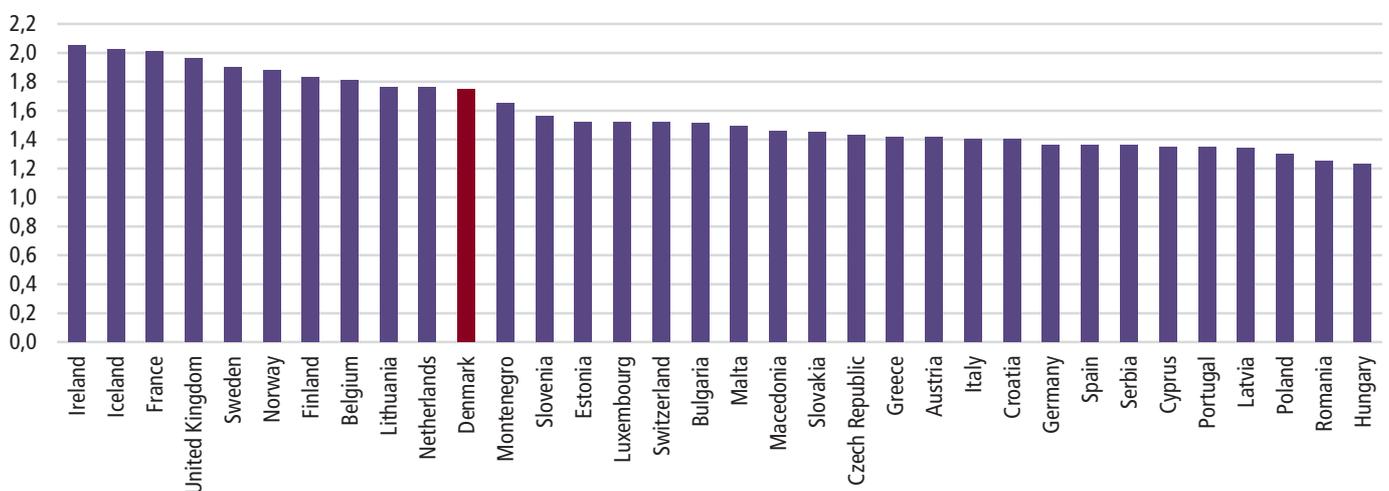

Source: Eurostat

Older mothers

Over the years, women have become increasingly mature before becoming mothers. In 2012, the average age of women giving birth for the first time was 30.7 years. This development has been especially pronounced since 1970, when the total average age of women giving birth was 26.7 years. The average for first-time mothers was 29.1 years in 2010.

One of the highest fertility rates in EU

Denmark has one of the highest fertility rates in the EU. In 2011, Ireland had the highest fertility rate (2.05) while Hungary had the lowest (1.23). In Denmark it was 1.75.

Deaths and life expectancy

Excess mortality for men compared to women

Men have a higher risk of dying in all age groups except a few ages in childhood where very few persons die. This is to say that there is an excess mortality for men in relation to women. The greatest difference is evident in the 18-39 age group, where the mortality rate for men in almost all ages is two to seven times higher than that for women.

Most of the people in Denmark live past 75

In recent years, the number of deaths in Denmark has been approximately 55,000 deaths a year. In 2012, the figure was 52,325. About 88 per cent of all deaths occurred in the over-60 age group and 49 per cent in the over-80 age group.

Life expectancy reflects the health of a population

Life expectancy is one of the most commonly used statistics for assessing the health of a population. Life expectancy is the average number of years that a person can expect to live, based on the latest figures for mortality. The latest life expectancy has been calculated at 77.9 years for men and 81.9 years for women.

Figure 8   **Life expectancy rates in selected countries. 2011**
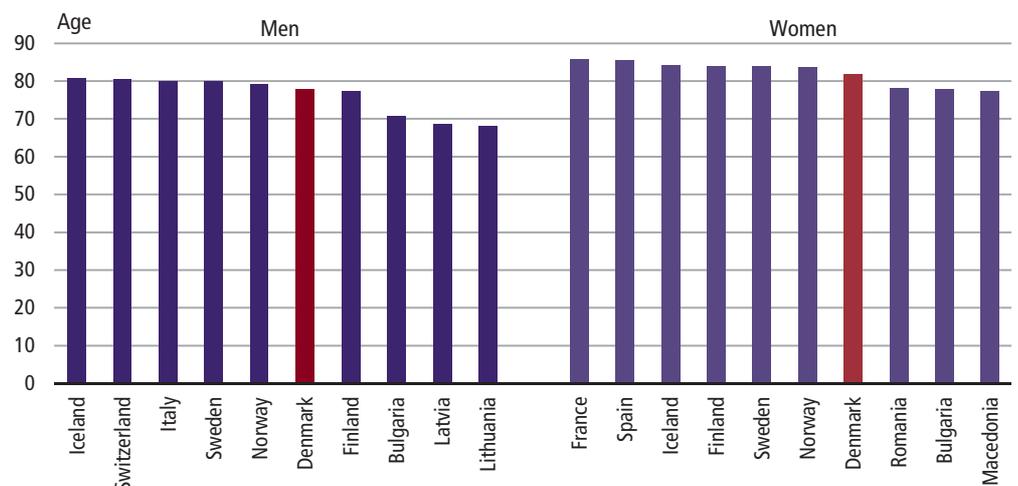

Source: Eurostat
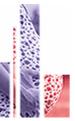

Danes live a shorter time than people in other European countries
The trend as regards life expectancy has not been as positive in Denmark as it has in many other countries. The trend towards stagnation in life expectancy was especially pronounced among Danish women.

In the 1960s, Denmark was among the countries with the highest life expectancy in the world, but later on Danish life expectancy was among the lowest in Western Europe. However, life expectancy has increased a little more during recent years. During the latest ten years life expectancy has increased by 3.2 years for men and 2.7 years for women.

One quarter of all deaths are caused by cancer
Cancer, heart diseases and cardio-vascular disorders in the brain are the three main causes of death. 50 per cent of all deaths are caused by one of these conditions. The number of deaths from heart disease has fallen in recent years, whereas the number of deaths by cancer shows the opposite tendency.

Fewer suicides
The number of suicides has been decreasing for some years, and the latest figures show 562 suicides in 2010, corresponding to 1.0 per cent of all deaths. Suicide is more than twice as common among men as among women.

Households, families and children

We marry later …
The way in which Danes form families has changed during the last 30 years. The forms of partnership have changed; but marriage is still the dominant form of partnership. 78 per cent of all couples living together are married. However, this percentage is decreasing, especially among the younger generations. In 1980, 66 per cent of all 30 year-old were married. In 2013, the corresponding figure is only 31 per cent for all 30 year-olds.

Simultaneously, the average age of women when they first get married has increased from 24.8 years to 32.4 years and from 27.5 years to 34.8 years for men during the period 1980-2012. In 2009 these average ages fell a little and it seems as if there is a stagnation for the first time since the 1960's.

… but still live as couples
The fact that people get older before they get married does not mean that they do not live as couples. It does, however, mean that it becomes increasingly common for couples to live together without being married. This is especially true of the younger generations.

Many singles
More than one third (36.5 per cent) of all adults live without a partner. Women comprise the majority of 53 per cent of them. Of those individuals with no partner, 80 per cent of the women and 94 per cent of the men live completely alone. The rest live with other persons, who are often their children.

**Figure 9
Suicides**

Figure 10   **Development in family types for adults**
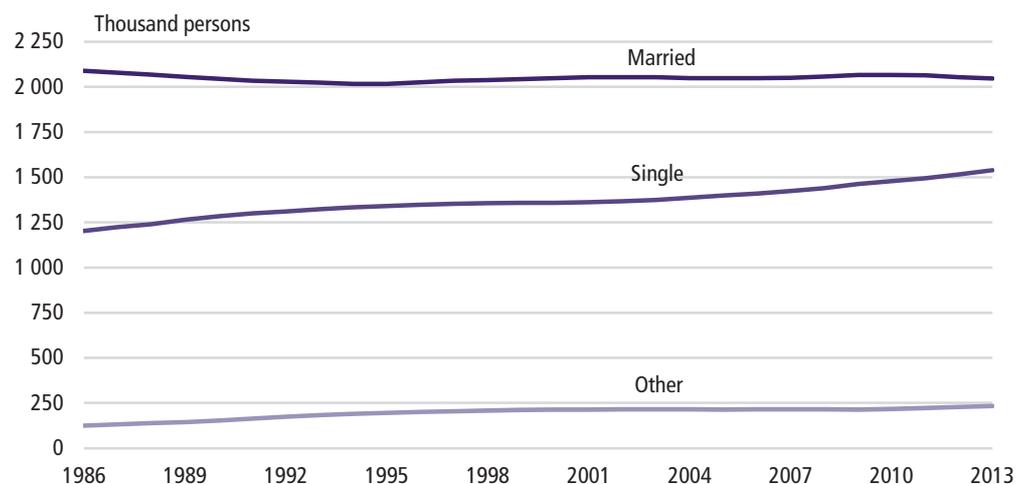

www.statbank.dk/fam100n

Marriages and divorces

**Figure 11
Marriages and divorces**

www.statbank.dk/hisb3

Fewer weddings ...

During the last 100 years the marital relations of the Danes have seen considerable changes. In the latter half of the 20th century the number of divorces was particularly high, and in the same period fewer people got married.

The low point of marriages was reached in 1982 with 24,300 marriages, and since then the level has increased and remained stable since 1997 on about 37.000 marriages per year. However, in 2009 the number decreased strikingly and in 2012 28,500 couples were married.

... and more divorces

The number of divorces increased during the 20th century and reached a yearly average of 13,000. In the 2000s the average was nearly 15,000. There are many reasons for the increasing number of divorces and the falling number of marriages. Since the beginning of the 20th century, a number of political initiatives have implied that it is easier to get a divorce. In connection with the legal amendments where the period of separation was reduced, the number of divorces increased temporarily.

Another reason is that many people are now more financially independent, and unlike previously it is no longer necessary to marry in order to achieve a reasonable living standard. The financial independence was also assisted by the circumstance that women entered to an increasing extent the labour market in the 1970s.

High number of divorces after 3 to 8 years of marriage
Half of all divorces take place within the first 10 years of marriage. Divorces are most common after 2-7 years of marriage. At the same time, more long-lasting marriages are dissolved by divorce than previously. While 18 per cent of all marriages in 1950 were dissolved by divorce after 25 years, 38 per cent of all marriages in 1980 were dissolved.

Figure 12   Divorces by duration of marriage. 2012
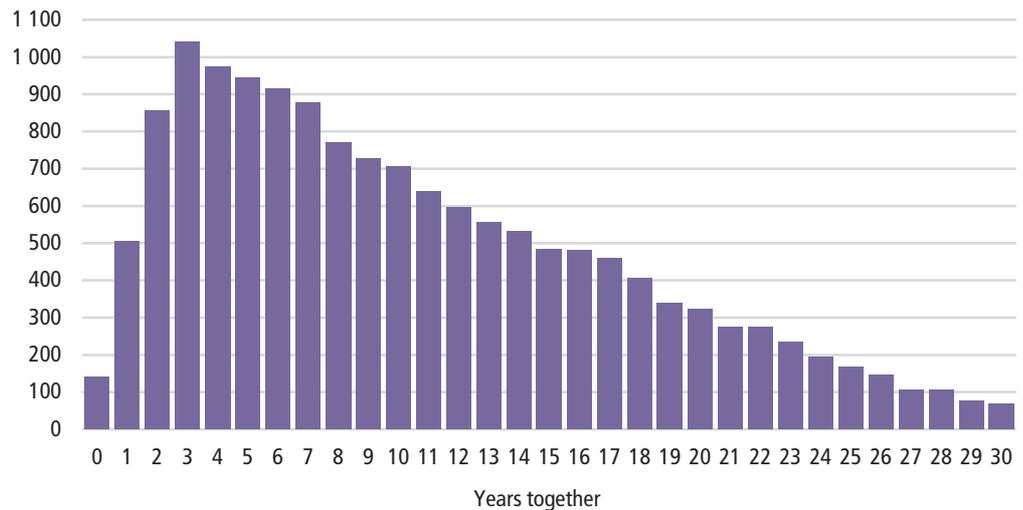

www.statbank.dk/ski107

Migrations

One in seven people move each year
In 2012, almost 839,000 internal migrations are registered. This corresponds to one in seven people moving each year. 34 per cent of the registered internal migrations were migrations from one municipality to another.

Immigration and emigration (external migration)
Denmark has more immigrants than emigrants. The level of immigration is, however, relatively low when compared to immigration statistics for countries such as Sweden and Germany.

Immigration is often thought of as immigration of foreign citizens, but Danes can also immigrate. In 2012, 30 per cent of all immigrants are Danish citizens returning after a shorter or longer period abroad or who are born by Danish parents abroad.

Danes emigrate – and then come back
When studying the Danish emigration statistics in 2012, it appears that 43 per cent are Danish citizens. These are usually individuals who go abroad for a period of time to study or work. Thus, most of these people will subsequently appear in the statistics as immigrants.

Figure 13 **Immigration and emigration**
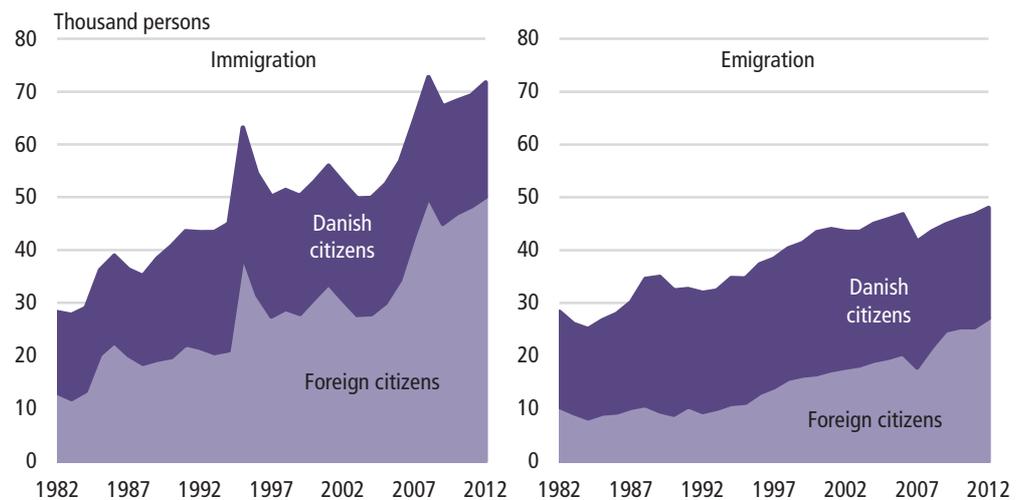

www.statbank.dk/indvan, udvan

More immigrants from remote countries

Previously, foreign citizens who migrated to Denmark came mainly from the other Nordic countries, the EU countries or the United States, and to some extent from Turkey and the former Yugoslavia.

During the 1980s and 1990s, a large proportion of all immigrants continued to come from these countries; a new trend did, however, emerge: an increase in immigration from Asian countries such as Iran, Iraq and Afghanistan as well as African countries such as Somalia and Ethiopia.

These groups consist mainly of refugees (and their families) who have been granted Danish residence permits.

The immigration within the last decade has furthermore been characterized by immigration of citizens from Poland.

Names

Jens and Anne are the most common forenames

In Denmark the most common first names for men are Peter and Jens. On 1 January 2013, the number was 50,080 and 49,977 persons, respectively, which corresponds to 18 per 1,000 men. Anne and Kirsten with 47,238 and 44,650 persons were number one and two on the list for women, corresponding to 17 and 16 per 1,000 women.

Jensen, Nielsen and Hansen are the most common Danish surnames

264,824 and 264,159 Danes have the surnames Jensen and Nielsen, respectively. Slightly less common is Hansen, which is the surname of 220,956 Danes. Together, these names each cover a seventh of the population.

This is followed by a number of names, such as Pedersen, Andersen, Christensen, Larsen and Sørensen. These names cover a total of 12 per cent of the population.

William and Emma are the most popular names among new-born children

In 2011, William was the most popular forename among new-born boys and was given to 22 out of 1,000 boys. Oliver and Noah are also popular boy's names. Among new-born girls, 21 out of 1,000 new-born girls were given the name Emma. Ida and Clara were number two and three with each 18 per 1,000 new-born girls.

The popularity of names for new-born children is rapidly changing. Very few parents called their children William from 1985 to 1995, and since then the name has become very popular until today. The use of Emma began to increase in the beginning of the 1990s. William leads for the second time whereas Emma has been leading six times earlier.

Elections

Elections to the Folketing (general elections)

Statistics are published on a number of different election types; general elections (to the Folketing), elections to region councils (formerly county councils), elections to municipality councils, elections to the European Parliament, and elections to local church councils. Statistics on referendums are also available.

Elections to the Folketing (the Danish parliament) are held before four years after the latest election; elections may, however, be called after a shorter span of time. A total of 175 members of parliament are elected in Denmark, two members are elected on the Faroe Islands, and two members are elected in Greenland.

16 general elections have been held since 1970. Five general elections were held during the 1970s, one every other year. Four elections were held during the 1980s, and the 1990s saw three elections. In the 2000s three elections were held – in 2001, 2005 and 2007. The latest election was held in 2011.

Figure 14   **Distribution of seats in the two most recent elections to the Folketing**
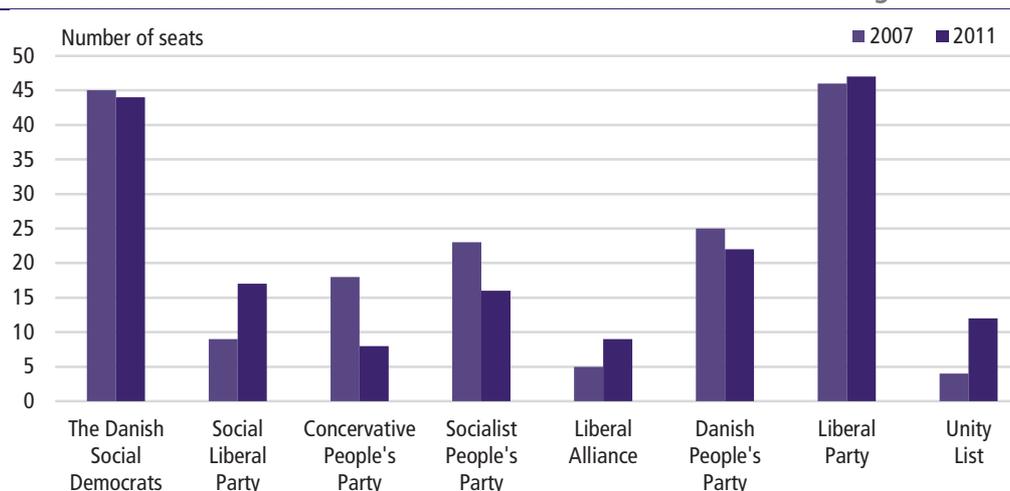

Table 46

Parties nominated and elected

At the latest election to the Folketing, nine parties were nominated, of which eight entered the Folketing. In 1987, 16 parties were nominated, of which only nine entered the Folketing.

Electoral turnout

In connection with the first four elections in the 1970s, more than 87 per cent of the electorate exercised their right to vote. Subsequent elections have attracted fluctuating electoral turnouts, with the minimum rate being 82.8 per cent in 1990.

The latest general election attracted 87.7 per cent of all voters. The electoral turnout in Denmark is among the highest in Europe.

Elections to the European Parliament

Elections to the European Parliament are held once every five years. The latest election was held in 2009. Denmark elects 13 MEPs. Elections to the European Parliament attract fewer voters than national elections. At the latest election, that took place at the same time as a referendum about the royal succession, the electoral turnout was 59.5 per cent. Nine parties were nominated, six of which entered the European Parliament. Six of the 13 elected persons were women.

Referendums

Since 1920, 15 referendums and two consultative referendums have been held. Three of these referendums have involved constitutional amendments (in 1920, 1939, and 1953), and five have concerned the voting age (in 1953, 1961, 1969, 1971, and 1978).

Four referendums and one consultative referendum have addressed Denmark's relationship with the EEC/EU (in 1972, 1992, 1993, 1998 and 2000). One referendum, in 1963, concerned acquisition of farms and conservation of nature, and one referendum in 2009 was about the royal succession.

Electoral turnout for referendums has varied to a great extent. The 1972 referendum on Danish accession to the EEC attracted the largest number of voters (90.1 per cent of the total voting population).
